

Void of time void of life

Yihao Zhu

String of flowers falling, into abyss, into past.
In front of my footprint, I stopped, looking into abyss.
In front of my last footprint, I look back, looking into past.
While I stopped, I look back.
Charred of flowers falling, I stopped crying.
Moments, of flowers falling, I stopped,
of flowers falling, I look back, looking into my died dreams.
Are there any of flowers falling?
I look back, edit my memory, ask my self.

Void swallows everything. I can never escape that string of grievous death.

Never hint me my past.
Never hint me my soul.
Never hint me my destiny of grievous death.
Length of my life, is now to the end.
Never hint me, please!
Point at me! My destiny.

While true hero lasts,
while meat of grievous death meaningfulness,
while meat is my body,
if meat break the law of soul,
if me, please get me out of there, get me out of grievous death,
my past why always counts?
Forgive me, my soul, my past, even my none-existing future.
While meat of grievous death meet soul of glorious sacrifice,
My future of grievous death, my past of grievous death meet.
It's killing my past, It's vanishing me.
Void of time void of life, of grievous death, me, my soul, my past, my
body, burns into dust, in vain
Never help me, please!
None of those strings of grievous death resize my past.
Void of time void of life, of grievous death,
my past, now is my whole life.

Readme:

1. The C++ code itself is technically beautiful. Since it reverse words in a sentence in-place. For example given an input of "I do not deserve". It will output "deserve not do I". (Sample usage can be referred to the attached .cpp file). This algorithm has a $O(n)$ time complexity (very fast) and $O(1)$ memory complexity (do not locate any additional variable relative to string size n). It is possibly the fastest algorithm to complete this reverse job.
2. The reason I implement this reverse algorithm for this poet is to hint the reader: If we can reverse everything we did, we said or even we succeed in, we may live a better life. However, it is impossible for us to manipulate the time. The biggest wish of our character in this poet, it to reverse the time. Unfortunately, he couldn't. He has to commit his life to suffer the consequence.
3. This poet describes the feeling of an upset man right before he subside. Basically saying he can not get rid of his past. And do not have courage to face his future. In the last sentence, ***my past, now is my whole life*** hints our character choose to end his life eventually.
4. I blend every C++ keywords into the poetry. Which means I do not ignore any of the word in my code. So there may be some part a little bit weird. For example, what I mean by meat is body. I am not a native speaker. But to me it is fine because I already hint the reader, ***while meat is my body*** So I think maybe we can consider it as a poetic expression. After all, I know this. Most of them is due to my trying to make it perfect and do not ignore a single word.
